Immunization Policy

Lincoln Family Wellness is dedicated to providing the highest quality of evidence-based medical care to our patients. We feel that immunizations are an essential part of high quality care. Proper immunizations protect the health of the individual child and adult, and protect everyone in the community as a whole. When you immunize yourself and your children, you are not only protecting your family from serious diseases, you are also helping to protect your entire community. Lincoln Family Wellness follows the vaccine schedule published by the Centers for Disease Control and the American Academy of Family Practice.

We understand that many patients have concerns about immunizations. As providers we feel there is no strong scientific evidence to withhold immunizations, unless medically contraindicated. Given our philosophy, we feel that any decision to not immunize your family members, or to alter the evidence-based vaccine schedule, is not compatible with a trusting physician-patient relationship which we value in our office. Because we believe that any decision to not immunize or to significantly alter the vaccine schedule puts your family at risk for preventable diseases and increases the health risks for our youngest patients, Lincoln Family Wellness reserves the right to respectfully decline or discharge under-immunized patients from our practice.
